NORTH-HOLLAND

Author Index—Volume 53

Berry, B.J.L., 155
Brooks, H., 21

Clarke R.E., 185
Clarysse, B., 139
Coates, J.F., 227
Cowan, R., 61

Debackere, K., 139
Dunphy, S.M., 279

Foray, D., 1, 3, 263
Freeman, C., 27

Gibbons, M., 263
Graves, S.B., 125
Grübler, A., 1, 3, 97
Gupta, U.G., 185

Herbig, P.R., 279
Howes, M.E., 279
Hultén, S., 61
Hunhammar, S., 213

Kim, N., 239
Kovoor-Misra, S., 169

Langowitz, N.S., 125

Martin J.-M., 81

Nakićenović, N., 97
Nitta, Y., 225

Phillips, F., 239

Rappa, M.A., 139
Ruttan, V.W., 41

Schelling, T.C., 15
Sedaitis, J.B., 293

Wernick, I.K., 111

Book Review Index—Volume 53

Bimber, B., *The Politics of Expertise in Congress: the Rise and Fall of the Office of Technology Assessment* (Vary Coates), 309

Bloomfield, M., *The Automated Society* (Alan L. Porter), 233

Goulet, D., *Development Ethics: A Guide to Theory and Practice* (Wendell Bell), 235

Margulis, L. and Sagan D., *What Is Life?* (Harold A. Linstone), 123

Norris, M., *Survival in the Software Jungle* (Kish J. Sharma), 319

Sapienza, A.M., *Managing Scientists* (Joseph P. Martino), 313

Shapira, P., ed., *The R&D Workers: Managing Innovation in Britain, Germany, Japan, and the United States* (Karol I. Pelc), 315

Subject Index—Volume 53

Absence of knowledge, research by accident and, 15
Aggregation, chaos research implications for new product forecasting and, 239
Application, discovery in context of, 263
Association, moving toward crisis preparedness and, 169
Assumptions, nuclear future and, 213
Attention management, innovation for sustainability and, 21

Technological Forecasting and Social Change 53, 323–330 (1996)
© 1996 Elsevier Science Inc.
655 Avenue of the Americas, New York, NY 10010
0040-1625/96/$15.00
PII S0040-1625(96)00159-X

Automated society, 233
Automobile technologies, escaping lock-in and, 61
"Away from the carbon atom" concept, energy technologies and, 81

Balance, discovery in context of application and, 263
Bibliography, Delphi technique and, 185
Bifurcations, chaos research implications for new product forecasting and, 239
Brand managers, chaos research implications for new product forecasting and, 239
Breakthroughs, escaping lock-in and, 61
Britain, managing R&D innovation in, 315
Business cycles, monetary policymaking and, 155
Business Week, global R&D multi-industry productivity comparison and, 125

Capacity for action, research by accident and, 15
Carbon emissions, decarbonization of global energy system and, 97
Chaos reseach, implications of for new product forecasting, 239
Choice, nuclear future and, 213
Civilian product development, commercializing state R&D in United States and Russia, 293
Cleanliness, decarbonization of global energy system and, 97
Cognitive process, research by accident and, 15
Collaborative research, network influence on innovative output in emerging technologies, 139
Companies, attention management and, 21
Competition, escaping lock-in and, 61
Complexity, discovery in context of application and, 263
Congress, politics of expertise in, 309
Consistency, induced innovation/path dependence and, 41
Consumers
  decarbonization of global energy system and, 97
  consuming materials the American way and, 111
Contemporary factor prices, induced innovation/path dependence and, 41
Continuous change, greening of technology and, 27
Convenience, decarbonization of global energy system and, 97
Country infrastructures, innovation funnel and, 279
Crisis
  escaping lock-in and, 61
  moving toward crisis preparedness, 169
  nuclear future and, 213
Cross-sectional data, network influence on innovative output in emerging technologies, 139
Curvilinear effect, network influence on innovative output in emerging technologies, 139

Data collection, chaos research implications for new product forecasting and, 239
Decarbonization, of global energy system, 97
Decision makers, Delphi technique and, 185
Decreasing returns, global R&D multi-industry productivity comparison and, 125
Defense technologists, commercializing state R&D in United States and Russia, 293
Delphi technique, theory and applications of, 185
Demand
  consuming materials the American way and, 111
  decarbonization of global energy system and, 97
  nuclear future and, 213
Demographics, consuming materials the American way and, 111
Development ethics, guide to theory and practice, 235

Diffusion
  chaos research implications for new product forecasting and, 239
  energy technologies and, 81
  innovation funnel and, 279
Discovery in the context of application, 263
Discriminators, innovation funnel and, 279
Dispersed knowledge, and technology and environment, 3
Distortion, by economists of contribution of science and technology to economy, 227
Diversity, energy technologies and, 81
Domains, Delphi technique and, 185
Duration, induced innovation/path dependence and, 41
Dynamics, chaos research implications for new product forecasting and, 239

Economics
  consuming materials the American way and, 111
  distortion of contributions to by science and technology, 227
  greening of technology and, 27
Efficacy, commercializing state R&D in United States and Russia, 293
Efficiency, research by accident and, 15
Electric vehicle, escaping lock-in and, 61
Emerging technologies
  network influence on innovative output in, 139
  niche markets and, 61
Empirical data, network influence on innovative output in emerging technologies, 139
End use of energy, decarbonization of global energy system and, 97
End-use technologies, energy technologies and, 81
Energy demand, nuclear future and, 213
Energy-environment interactions, decarbonization of global energy system and, 97
Energy shortage, nuclear future and, 225
Energy studies, research by accident and, 15
Energy system, global, 97
Energy technologies, overview, 81
England, managing R&D innovation in, 315
Environment
  attention management and, 21
  consuming materials the American way and, 111
  decarbonization of global energy system and, 97
  induced innovation/path dependence and, 41
  technology and, 3
Environmentally sustainable development paths, attention management and, 21
Ethics, development, 235
Europe, global R&D multi-industry productivity comparison and, 125
Evolution, decarbonization of global energy system and, 97
Expectations, moving toward crisis preparedness and, 169
Expenditure, global R&D multi-industry productivity comparison and, 125
Experience of crisis, moving toward crisis preparedness and, 169
Extracting, consuming materials the American way and, 111

Factor prices, induced innovation/path dependence and, 41
Federal laboratories, commercializing state R&D in United States and Russia, 293
Filters, innovation funnel and, 279
Final energy, decarbonization of global energy system and, 97
Flexibility, decarbonization of global energy system and, 97
Fluctuations, chaos research implications for new product forecasting and, 239
Fundamental changes, moving toward crisis preparedness and, 169

Germany, managing R&D innovation in, 315

Global energy system, decarbonizing, 97
Grandfathering, attention management and, 21
Greening, of technology, 27
Growth, greening of technology and, 27

Historical development, induced innovation/path dependence and, 41
Historical reality, nuclear future and, 225
Holistic scenario, nuclear future and, 225
Human infrastructure, innovation funnel and, 279
Hypersonic aircraft research program, discovery in context of application and, 263

Ignorance, and technology and environment, 3
Impact-adjusted patents, global R&D multi-industry productivity comparison and, 125
Imperatives, discovery in context of application and, 263
Incentives, greening of technology and, 27
Industrialized contries, consuming materials the American way and, 111
Industry
  attention management and, 21
  global R&D multi-industry productivity comparison and, 125
  innovation funnel and, 279
  moving toward crisis preparedness and, 169
Inertia
  induced innovation/path dependence and, 41
  and technology and environment, 3
Inflation rate, business cycles and, 155
Information distribution and generation, research by accident and, 15
Infrastructure
  energy technologies and, 81
  escaping lock-in and, 61
  induced innovation/path dependence and, 41
  innovation funnel and, 279
In-house research, network influence on innovative output in emerging technologies, 139
Infratechnologies, discovery in context of application and, 263
Initially selected process array, induced innovation/path dependence and, 41
Innovation
  attention management and, 21
  greening of technology and, 27
  induced, 41
  managing R&D and, 315
Innovation funnel, 279
Innovations, greening of technology and, 27
Innovative output
  global R&D multi-industry productivity comparison and, 125
  network influence on in emerging technologies, 139
Input, consuming materials the American way and, 111
Institutional changes, greening of technology and, 27
Institutional frameworks, energy technologies and, 81
Instrumentalities, discovery in context of application and, 263
Integral nature, discovery in context of application and, 263
Integration of information, attention management and, 21
Interaction, discovery in context of application and, 263
Internal combustion engine, escaping lock-in and, 61
International region, R&D multi-industry productivity comparison and, 125
Inter-organizational ties, commercializing state R&D in United States and Russia, 293
Interrelatedness, energy technologies and, 81
Interval effects, chaos research implications for new product

forecasting and, 239
Intraindustry sources, escaping lock-in and, 61
Invention, innovation funnel and, 279
Investment lumpiness, energy technologies and, 81
Irreversibility, energy technologies and, 81
Ivory tower, dismantling, 139

Japan
  global R&D multi-industry productivity comparison and, 125
  managing R&D innovation in, 315

Knowledge
  discovery in context of application and, 263
  research by accident and, 15

Large-scale materials, consuming materials the American way and, 111
Large technoeconomic system transitions, greening of technology and, 27
Launches, chaos research implications for new product forecasting and, 239
Least squares dummy variable models, network influence on innovative output in emerging technologies, 139
Level of energy, decarbonization of global energy system and, 97
Level of return, global R&D multi-industry productivity comparison and, 125
Life, nature of, 123
Likelihood, innovation funnel and, 279
Limiting input, consuming materials the American way and, 111
"Limits to growth" debate, greening of technology and, 27
Linear model, greening of technology and, 27
Lock-in, escaping, 61
Long-range forecasting, Delphi technique and, 185
Long-wave considerations, preferred policy choices and, 155
Lumpiness of investments, energy technologies and, 81

Macrocosm, innovation funnel and, 279
Macro-level discriminators, innovation funnel and, 279
Management
  discovery in context of application and, 263
  R&D innovation and, 315
  of scientists, 313
Marketing research, chaos research implications for new product forecasting and, 239
Market saturation, monetary policymaking and, 155
Material infrastructure, innovation funnel and, 279
Materials input, consuming materials the American way and, 111
Measurement, chaos research implications for new product forecasting and, 239
Media scrutiny, moving toward crisis preparedness and, 169
Metathemes, and technology and environment, 3
Method bias, nuclear future and, 213, 225
Micro-level discriminators, innovation funnel and, 279
Military, commercializing state R&D in United States and Russia, 293
Monetary policy-making, overview, 155
"More information is better" principle, attention management and, 21
Moscow area, commercializing state R&D in, 293
Motivation, moving toward crisis preparedness and, 169
Multi-industry basis, global R&D productivity comparison and, 125

Nature of firm, innovation funnel and, 279
  influence on innovative output in emerging technologies, 139

innovative output in emerging technologies and, 139
Networks of expertise, attention management and, 21
New markets, commercializing state R&D in United States and Russia, 293
New members on top management team, moving toward crisis preparedness and, 169
New product forecasting, chaos research and, 239
Niche markets, escaping lock-in and, 61
1970s, research by accident and, 15
Nuclear future, method bias and, 213, 225
Nuclear weapons, research by accident and, 15

Office of Technology Assessment, rise and fall of, 309
Oil resources, nuclear future and, 213
Organizations
commercializing state R&D in United States and Russia, 293
discovery in context of application and, 263
moving toward crisis preparedness and, 169
network influence on innovative output in emerging technologies, 139
Output
global R&D multi-industry productivity comparison and, 125
network influence on in emerging technologies, 139

Patents, global R&D multi-industry productivity comparison and, 125
Path dependence, induced innovation and, 41
Phillips curve, overview, 155
Pluralism, energy technologies and, 81
Policy-making
attention management and, 21
energy technologies and, 81
monetary, 155
research by accident and, 15
and technology and environment, 3
Positive feedbacks, escaping lock-in and, 61
Preferences
consuming materials the American way and, 111
monetary policymaking and, 155
nuclear future and, 225
Preparedness, crisis, 169
Prerequisites, innovation funnel and, 279
Preservation issues, and technology and environment, 3
Primary energy, decarbonization of global energy system and, 97
Problem solvers, discovery in context of application and, 263
Processing, consuming materials the American way and, 111
Product studies, chaos research implications for new product forecasting and, 239
Progression, innovation funnel and, 279
Projected income, consuming materials the American way and, 111

Qualitative forecasting, Delphi technique and, 185

R&D
attention management and, 21
commercializing state R&D in United States and Russia, 293
discovery in context of application and, 263
global multi-industry productivity comparison and, 125
managing inovation and, 315
network influence on innovative output in emerging technologies, 139
Rand Corporation, Delphi technique and, 185
Rate, decarbonization of global energy system and, 97
Raw materials, consuming materials the American way and, 111
Recycling, consuming materials the American way and, 111

Reduction, consuming materials the American way and, 111
Regulation
  escaping lock-in and, 61
  greening of technology and, 27
  moving toward crisis preparedness and, 169
Relative factor prices, induced innovation/path dependence and, 41
Reliance, commercializing state R&D in United States and Russia, 293
Renewable energy sources, nuclear future and, 213
Research organizations, network influence on innovative output in emerging technologies, 139
Resistance to action, research by accident and, 15
Richer countries, consuming materials the American way and, 111
Russia, commercializing state R&D in, 293

Saturated markets
  consuming materials the American way and, 111
  monetary policymaking and, 155
Scarcity, nuclear future and, 213
Scientic communities
  attention management and, 21
  distortion of contributions by to economy, 227
  managing scientists, 313
  research by accident and, 15
Screening process, innovation funnel and, 279
Secondary materials, consuming materials the American way and, 111
Self-reinforcing processes, escaping lock-in and, 61
Shift
  consuming materials the American way and, 111
  energy technologies and, 81
  induced innovation/path dependence and, 41
Shortage predictions, consuming materials the American way and, 111
Short-term relationships, monetary policymaking and, 155
Single entity, discovery in context of application and, 263
Size of firm, innovation funnel and, 279
Sleeping giants, waking, 293
Slowing down, induced innovation/path dependence and, 41
Society
  automated, 233
  consuming materials the American way and, 111
  greening of technology and, 27
Sociocultural tendencies, innovation funnel and, 279
Sociometric position, network influence on innovative output in emerging technologies, 139
Software jungle, survival in, 319
Solar energy, nuclear future and, 213, 225
Specification error, chaos research implications for new product forecasting and, 239
Spin-offs, commercializing state R&D in United States and Russia, 293
Standards, innovation funnel and, 279
Strategy, attention management and, 21
Structural changes
  commercializing state R&D in United States and Russia, 293
  decarbonization of global energy system and, 97
  innovation funnel and, 279
Superficial changes, moving toward crisis preparedness and, 169
Support industries, escaping lock-in and, 61
Survival, in software jungle, 319
Sustainability
  consuming materials the American way and, 111
  energy technologies and, 81
  greening of technology and, 27
  innovation for, 21
Systemic aspects, energy technologies and, 81

Taking action, research by accident and, 15
Taste, escaping lock-in and, 61
Technical change, induced innovation/path dependence and, 41
Techno-economic systems, monetary policymaking and, 155
Technological advances, consuming materials the American way and, 111
Technological trajectories, energy technologies and, 81
Technology
  distortion of contributions by to economy, 227
  environment and, 3
  greening of, 27
Technology characteristics, research by accident and, 15
Technology-driven forecasts, overview, 155
Technology policy
  attention management and, 21
  energy technologies and, 81
Technology transfer, commercializing state R&D in United States and Russia, 293
Tensions, and technology and environment, 3
Testing phase, discovery in context of application and, 263
Threat, moving toward crisis preparedness and, 169
Time
  network influence on innovative output in emerging technologies, 139
  research by accident and, 15
Top management team, moving toward crisis preparedness and, 169
Transgene plant research, network influence on innovative output in emerging technologies, 139
Transition
  escaping lock-in and, 61
  greening of technology and, 27
Trilemma, nuclear future and, 213
Two-generation period, monetary policymaking and, 155

Unanticipated knowledge, research by accident and, 15
Uncertainty
  research by accident and, 15
  and technology and environment, 3
Underpinnings, discovery in context of application and, 263
Unemployment rate, business cycles and, 155
United States
  commercializing state R&D in, 293
  global R&D multi-industry productivity comparison and, 125
  managing R&D innovation in, 315
  materials consumption in, 111
  monetary policymaking in, 155
  Office of Technology Assessment in, 309
  politics of expertise in Congress, 309
Upstream energy sector, decarbonization of global energy system and, 97

Validity, nuclear future and, 213
Value, induced innovation/path dependence and, 41
Varied consumption, consuming materials the American way and, 111

Workers, managing R&D innovation and, 315
World economy, greening of technology and, 27
